Seclusion and Restraint – Reporting Summary, 2023

Background: Per Human Rights Regulation <u>12VAC35-115-230</u>, licensed providers are required to submit an annual report of each instance of seclusion or restraint [<u>12VAC35-115-30</u>], or both **for each licensed service** by January 15th of each year.

2023 Response rate:

Of the 4,500 licensed services delivered by the 2,064 providers in Calendar Year 2023, we received responses for 3,604 services, and did not receive responses from 896 services for reporting year 2024. This means that providers either did not respond or did not respond for *all* services. **This is a response rate of 80%.** This is shown in **Figure 1**.

<u>Results:</u> For each licensed service, providers report the number of unique instances of physical restraint, mechanical restraint, pharmacological restraint, and seclusion. The number of unique instances, the individuals involved, and the leading reason for the seclusion/restraint is depicted in **Figure 2** below. For physical and mechanical restraint, the total number of minutes is also reported. The highest number of instances and minutes reported were associated with mechanical restraints, while the highest number of individuals were associated with physical restraint.

Physical Restraint	Mechanical Restraint	Pharmacological Restraint	Seclusion
.			
8,941 unique	33,004 unique	1,203 unique	1 <i>,</i> 477 unique

Behavioral purpose	Behavioral purpose		

Summary: The total number of licensed services reporting use of Seclusion and Restraints for calendar year 2023, represented 8% (308) of all responses. Additionally, of the unique instances reported: 20% were Physical, 74% were Mechanical, 3% were Pharmacological, and 3% were Seclusion. Information such as this will continue to be utilized by DBHDS Office of Human Rights in continued efforts to identify and reduce trends of inappropriate use of seclusion and restraint. <u>Senate Bill 569</u> will direct DBHDS to convene a work group to propose additional regulations to allow for the use of (i) evidence-based and recovery-oriented seclusion and restraint practices and (ii) alternative behavior management practices that may limit or replace the use of seclusion and restraint in hospitals, residential programs, and licensed facilities. The bill further requires the Department to submit a report of its findings, recommendations, and proposed regulations to the General Assembly by November 1, 2025.
